

# VALET® PLUS

Pediatrics

*"We appreciate the ease to get our daughter in and out using the Valet Plus versus the heavy lifting and twisting we went through with other vehicles."*

— Matt R. Ontario

Transport infants and young children in car seats safely and easily with the Valet Plus optional LATCH kit.

What's LATCH? LATCH is a system that makes child safety seat installation easier without using seat belts. LATCH is required on child safety seats and most vehicles manufactured after September 1, 2001.

- Valet Plus is LATCH compliant (FMVSS 255) when not exceeding weight limits\*
- Forward or rear facing car seats; first or second row
- LATCH safely secures the child seat while the Valet Plus rotates in and out of the vehicle.
- Refer to child seat/booster seat label to determine whether LATCH should be used alone or with the vehicle's seat belt

\*The Bruno LATCH system is rated up to 80 lbs. If the weight of your child and car seat is greater than 80 lbs, the vehicle's seat belt must be used.
